Sole source of wireless NIRS device; PortaLite MKII

To whom it concerns,

We, Artinis Medical Systems BV, declare that we are the only manufacturer of the PortaLite MKII, wireless and portable NIRS devices, in the world.

The "PortaLite MKII" is produced in the Netherlands. This is the only long-range wireless and portable NIRS device in the world operating with 100 Hz sample rate to be able to measure tissue oxygenation in both brain and muscle. It has two detachable sensors, each sensor has three normal channels and three short separation channels, allowing for both deep and superficial measurements.

With kind regards,

Willy Colier, CEO
Artinis Medical Systems B.V.
